

Cyclehoop for Railings

The Cyclehoop for Railings convert existing pedestrian guard railings into secure cycle parking for a single bicycle.

Traditional cycle stands require digging, concreting and sufficient pavement space. Retrofitting existing street furniture allows cycle parking to be provided in locations where normal cycle stands cannot be installed.

Advantages

- Easy to install with simple tools, saving time and money
- Ideal for locations where pavement space is limited
- Compact design helps reduce street clutter
- Pedestrian friendly: prevents bicycles from falling over
- The design allows cyclists to lock through the frame and both wheels reducing the risk of theft
- Prevents thieves from cutting railing bars
- Allows bicycles to be parked neatly and securely against pedestrian guard railings

Options

- Mild steel powdercoated
- Stainless steel

Technical Specification

- Diameter 500mm
- Depth 160mm
